

## Assignment-2

- 1) Research and provide three real-world applications where C programming is extensively used, such as in embedded systems, operating systems, or game development.

three real-world applications where C programming :

### Operating Systems

- ⇒ Core parts of Windows, Linux are written in C.

### Game Development

- ⇒ Popular game engines like Doom built using C.
- ⇒ Allows fast execution and efficient memory handling for real-time games.

### Compiler Development

- ⇒ Many compilers are written in C.
- ⇒ C helps low-level software that translates high-level code to machine code.

- 2) o Install a C compiler on your system and configure the IDE.  
Write your first program to print "Hello, World!" and run it.

```
3) #include <stdio.h>
4)
5) int main(){
6)
7)     printf("Hello wolrd");
8)     return 0;
9) }
```

```
PS D:\javascript\New folder> cd "d:\javascript\New folder\" ; if ($?) { gcc plindrom.c
Hello wolrd
PS D:\javascript\New folder>
```

- 3) Write a C program that includes variables, constants, and comments. Declare and use different data types (int, char, float) and display their values.

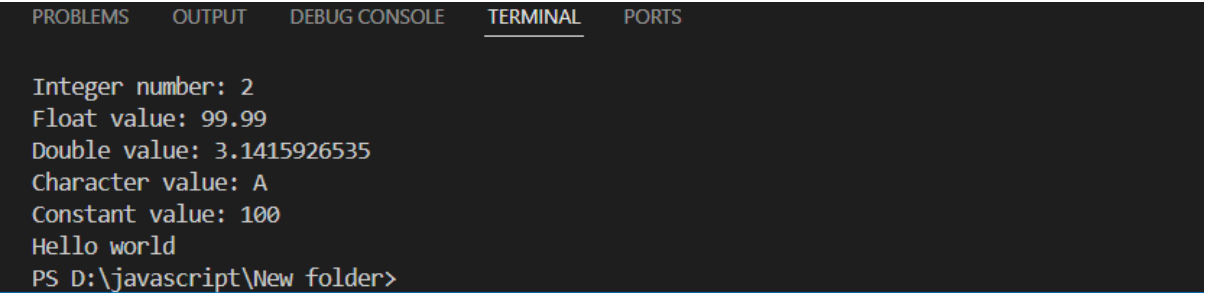

```
#include <stdio.h>

int main() {
    // Constant declaration
    const int constvalue = 100;

    // Variable declarations
    int num = 2;
    float price = 99.99f;
    double pi = 3.1415926535;
    char grade = 'A';

    // Output all values
    printf("\nInteger number: %d", num);
    printf("\nFloat value: %.2f", price);
    printf("\nDouble value: %.10lf", pi);
    printf("\nCharacter value: %c", grade);
    printf("\nConstant value: %d", constvalue);
    printf("\nHello world");

    return 0;
}
```

The screenshot shows a code editor with a dark theme. At the top, there are tabs for 'PROBLEMS', 'OUTPUT', 'DEBUG CONSOLE', 'TERMINAL', and 'PORTS'. The 'TERMINAL' tab is active, displaying the output of the C program. The output consists of six lines: 'Integer number: 2', 'Float value: 99.99', 'Double value: 3.1415926535', 'Character value: A', 'Constant value: 100', and 'Hello world'. Below the output, the command prompt shows the current directory as 'PS D:\javascript\New folder>'.

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

Integer number: 2
Float value: 99.99
Double value: 3.1415926535
Character value: A
Constant value: 100
Hello world
PS D:\javascript\New folder>
```

**4) Write a C program that accepts two integers from the user and performs arithmetic, relational, and logical operations on them. Display the results.**

```
#include <stdio.h>

int main() {
    int a, b;

    // Input from user
    printf("Enter first integer: ");
    scanf("%d", &a);

    printf("Enter second integer: ");
    scanf("%d", &b);

    // Arithmetic Operations
    printf("\n--- Arithmetic Operations ---\n");
    printf("a + b = %d\n", a + b);
    printf("a - b = %d\n", a - b);
    printf("a * b = %d\n", a * b);
    printf("a / b = %d\n", a / b);

    // Relational Operations
    printf("\n--- Relational Operations ---\n");
    printf("a == b: %d\n", a == b);
    printf("a != b: %d\n", a != b);
```

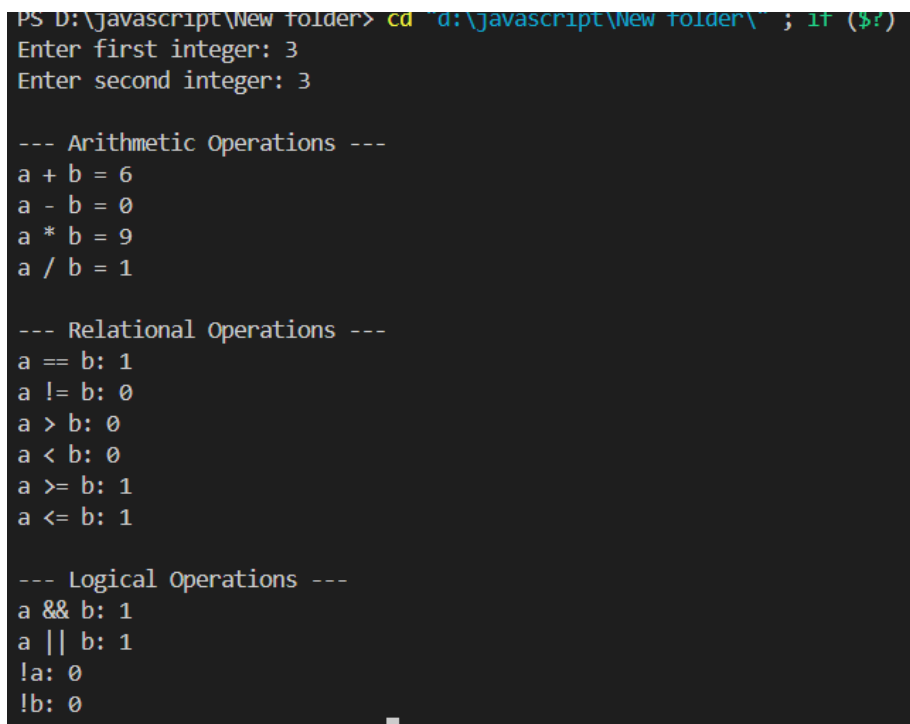

```

printf("a > b: %d\n", a > b);
printf("a < b: %d\n", a < b);
printf("a >= b: %d\n", a >= b);
printf("a <= b: %d\n", a <= b);

// Logical Operations
printf("\n--- Logical Operations ---\n");
printf("a && b: %d\n", a && b);
printf("a || b: %d\n", a || b);
printf("!a: %d\n", !a);
printf("!b: %d\n", !b);

return 0;
}

```

```

PS D:\javascript\New folder> cd "d:\javascript\New folder\" ; if ($?) {
Enter first integer: 3
Enter second integer: 3

--- Arithmetic Operations ---
a + b = 6
a - b = 0
a * b = 9
a / b = 1

--- Relational Operations ---
a == b: 1
a != b: 0
a > b: 0
a < b: 0
a >= b: 1
a <= b: 1

--- Logical Operations ---
a && b: 1
a || b: 1
!a: 0
!b: 0

```

**5) EXERCISE:** o Write a C program to check if a number is even or odd using an if-else statement. Extend the program using a switch statement to display the month name based on the user's input (1 for January, 2 for February, etc.).

```
#include <stdio.h>
```

```
int main() {
```

```
    int num, month;
```

```
    // Part 1: Check Even or Odd using if-else
```

```
    printf("Enter a number : ");
```

```
    scanf("%d", &num);
```

```
    if (num % 2 == 0) {
```

```
        printf("The number %d is Even.\n", num);
```

```
    } else {
```

```
        printf("The number %d is Odd.\n", num);
```

```
    }
```

```
    // Part 2: show month name using the switch
```

```
    printf("\nEnter a number (1 to 12) to get the month name: ");
```

```
    scanf("%d", &month);
```

```
    switch (month) {
```

```
        case 1: printf("January"); break;
```

```
        case 2: printf("February"); break;
```

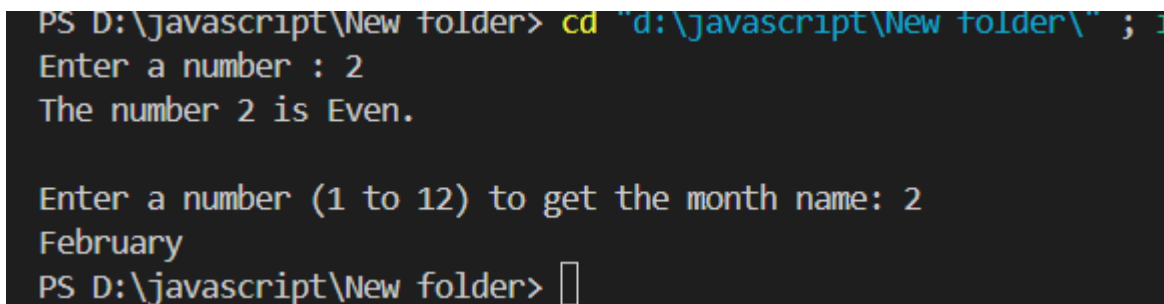

```
        case 3: printf("March"); break;
```

```

    case 4: printf("April"); break;
    case 5: printf("May"); break;
    case 6: printf("June"); break;
    case 7: printf("July"); break;
    case 8: printf("August"); break;
    case 9: printf("September"); break;
    case 10: printf("October"); break;
    case 11: printf("November"); break;
    case 12: printf("December"); break;
    default: printf("Invalid month number!");
}

return 0;
}

```

```

PS D:\javascript\New folder> cd "d:\javascript\New folder\" ; .\1
Enter a number : 2
The number 2 is Even.

Enter a number (1 to 12) to get the month name: 2
February
PS D:\javascript\New folder> 

```

**6) Write a C program to print numbers from 1 to 10 using all three types of loops (while, for, do-while).**

```
#include <stdio.h>
```

```
int main() {
```

```
int i;
```

```
// Using while loop
```

```
printf("Numbers from 1 to 10 using while loop:\n");
```

```
i = 1;
```

```
while (i <= 10) {
```

```
    printf("%d ", i);
```

```
    i++;
```

```
}
```

```
// Using for loop
```

```
printf("\n\nNumbers from 1 to 10 using for loop:\n");
```

```
for (i = 1; i <= 10; i++) {
```

```
    printf("%d ", i);
```

```
}
```

```
// Using do-while loop
```

```
printf("\n\nNumbers from 1 to 10 using do-while loop:\n");
```

```
i = 1;
```

```
do {
```

```
    printf("%d ", i);
```

```
    i++;
```

```
} while (i <= 10);
```

```
printf("\n");
```

```
return 0;
```

}

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

Numbers from 1 to 10 using while loop:
1 2 3 4 5 6 7 8 9 10

Numbers from 1 to 10 using for loop:
1 2 3 4 5 6 7 8 9 10

Numbers from 1 to 10 using do-while loop:
1 2 3 4 5 6 7 8 9 10
```

**7) Write a C program that uses the break statement to stop printing numbers when it reaches 5. Modify the program to skip printing the number 3 using the continue statement.**

```
#include <stdio.h>
```

```
int main() {
```

```
    int i;
```

```
    printf("Printing numbers from 1 to 10:\n");
```

```
    for (i = 1; i <= 10; i++) {
```

```
        if (i == 3) {
```

```
            continue; // Skip number 3
```

```
        }
```

```
        if (i == 5) {
```

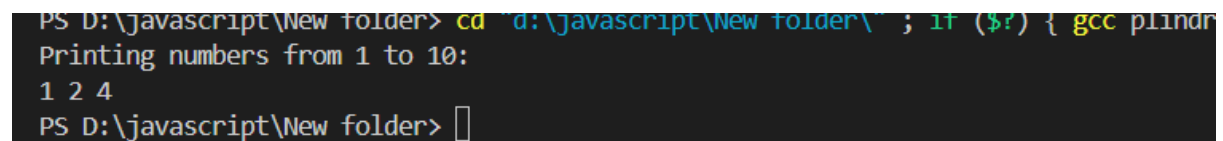

```

        break; // Stop loop when number is 5
    }
    printf("%d ", i);
}

printf("\n");
return 0;
}

```

```

PS D:\javascript\New folder> cd "d:\javascript\New folder\" ; if ($?) { gcc plindr
Printing numbers from 1 to 10:
1 2 4
PS D:\javascript\New folder>

```

8) Write a C program that calculates the factorial of a number using a function. Include function declaration, definition, and call.

```
#include <stdio.h>
```

```
// Function Declaration
```

```
int factorial(int n);
```

```
int main() {
```

```
    int num;
```

```
// Input from user
```

```
printf("Enter a number: ");
```

```

scanf("%d", &num);

// Handle negative input
if (num < 0) {
    printf("Factorial is not defined for negative numbers.\n");
} else {
    // Function Call
    int result = factorial(num);
    printf("Factorial of %d is %d\n", num, result);
}

return 0;
}

// Function Definition
int factorial(int n) {
    int fact = 1;
    for(int i = 1; i <= n; i++) {
        fact *= i;
    }
    return fact;
}

```

```

PS D:\c language\ok> cd d:\c language\ok\ ; if ($?) { gcc 1.c -o 1 } ; 1
Enter a number: 5
Factorial of 5 is 120
PS D:\c language\ok> 

```

- 10) Write a C program that stores 5 integers in a one-dimensional array and prints them. Extend this to handle a two-dimensional array (3x3 matrix) and calculate the sum of all elements.

```
#include <stdio.h>
```

```
int main() {
```

```
    int arr1[5];
    printf("Enter 5 integers for 1D array:\n");
    for(int i = 0; i < 5; i++) {
        scanf("%d", &arr1[i]);
    }
```

```
    printf("1D Array Elements:\n");
    for(int i = 0; i < 5; i++) {
        printf("%d ", arr1[i]);
    }
    printf("\n");
```

```
    int matrix[3][3], sum = 0;
```

```
    printf("\nEnter elements for 3x3 matrix:\n");
    for(int i = 0; i < 3; i++) {
        for(int j = 0; j < 3; j++) {
            scanf("%d", &matrix[i][j]);
            sum += matrix[i][j];
        }
    }
```

```
    printf("2D Matrix Elements:\n");
    for(int i = 0; i < 3; i++) {
        for(int j = 0; j < 3; j++) {
            printf("%d ", matrix[i][j]);
        }
        printf("\n");
    }
```

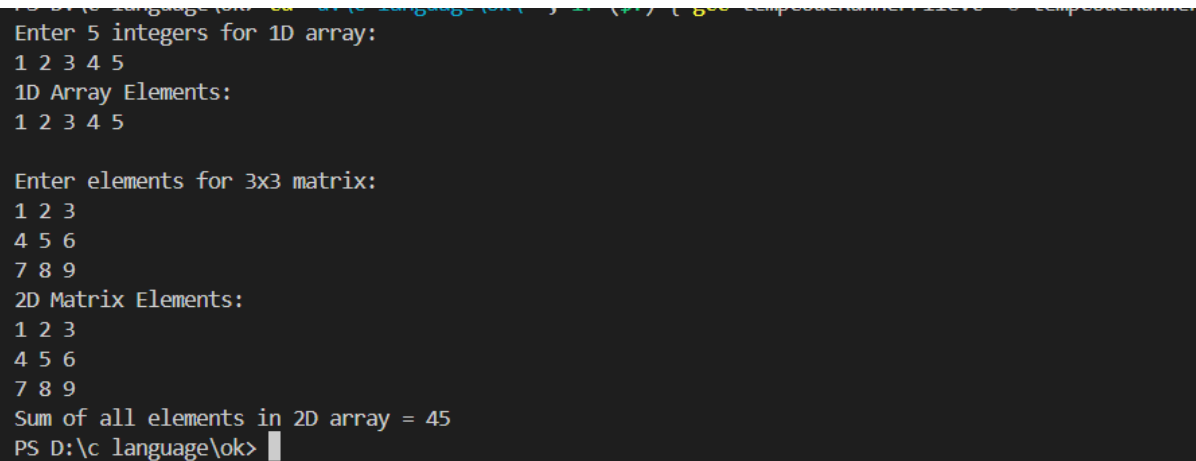

```

    }

    printf("Sum of all elements in 2D array = %d\n", sum);

    return 0;
}

```

```

PS D:\c language\ok> gcc 2d_array.c -o 2d_array.exe
Enter 5 integers for 1D array:
1 2 3 4 5
1D Array Elements:
1 2 3 4 5

Enter elements for 3x3 matrix:
1 2 3
4 5 6
7 8 9
2D Matrix Elements:
1 2 3
4 5 6
7 8 9
Sum of all elements in 2D array = 45
PS D:\c language\ok>

```

- 10) Write a C program to demonstrate pointer usage. Use a pointer to modify the value of a variable and print the result.

```

#include <stdio.h>

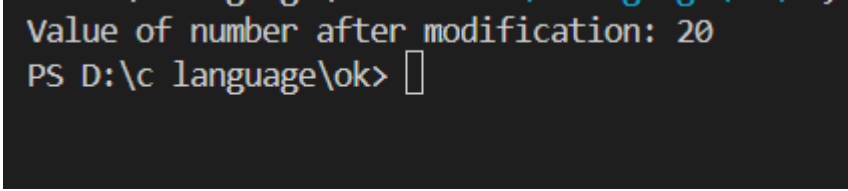

int main() {
    int number = 10;
    int *ptr;
    ptr = &number;

    *ptr = 20;

    // Print the result
    printf("Value of number after modification: %d\n", number);
}

```

```
    return 0;
}
```

```
Value of number after modification: 20
PS D:\c language\ok> 
```

- 11) Write a C program that takes two strings from the user and concatenates them using `strcat()`. Display the concatenated string and its length using `strlen()`.

```
#include <stdio.h>
```

```
#include <string.h>
```

```
int main() {
```

```
    char str1[100], str2[100];
```

```
    // Input first string
```

```
    printf("Enter the first string: ");
```

```
    gets(str1);
```

```
    // Input second string
```

```
    printf("Enter the second string: ");
```

```
    gets(str2);
```

```
    // Concatenate strings
```

```

strcat(str1, str2);

printf("Concatenated string: %s\n", str1);

// Display length
printf("Length of concatenated string: %lu\n", strlen(str1));

return 0;
}

```

```

PS D:\c language\ok> cd "d:\c language\ok\" ; if ($?) { gcc 4.c -o 4 } ; if ($?) { .\4 }
Enter the first string: helo word
Enter the second string: good evning
Concatenated string: helo wordgood evning
Length of concatenated string: 20
PS D:\c language\ok> 

```

- 12) Write a C program that defines a structure to store a student's details (name, roll number, and marks). Use an array of structures to store details of 3 students and print them.

```

#include <stdio.h>

// Define the structure
struct Student {
    char name[50];
    int roll;
    float marks;
};

int main() {
    struct Student students[3]; // Array of 3 structures

```

```

// Input details for each student
for (int i = 0; i < 3; i++) {
    printf("Enter details for student %d:\n", i + 1);
    printf("Name: ");
    scanf("%s", students[i].name);
    printf("Roll Number: ");
    scanf("%d", &students[i].roll);
    printf("Marks: ");
    scanf("%f", &students[i].marks);
}

// Display the entered details
printf("\nStudent Details:\n");
for (int i = 0; i < 3; i++) {
    printf("Student %d:\n", i + 1);
    printf("Name: %s\n", students[i].name);
    printf("Roll Number: %d\n", students[i].roll);
    printf("Marks: %.2f\n\n", students[i].marks);
}

return 0;
}

```

```

PS D:\c language\ok> cd "d:\c language\ok\" ; if ($?) { gcc 5.c -o 5 } ; if ($?) { .\5 }
Enter details for student 1:
Name: smit
Roll Number: 1
Marks: 80
Enter details for student 2:
Name: ved
Roll Number: 2
Marks: 60
Enter details for student 3:
Name: ashu
Roll Number: 3
Marks: 50

Student Details:
Student 1:
Name: smit
Roll Number: 1
Marks: 80.00

Student 2:
Name: ved
Roll Number: 2
Marks: 60.00

Student 3:
Name: ashu
Roll Number: 3
Marks: 50.00

```

- 13) Write a C program to create a file, write a string into it, close the file, then open the file again to read and display its contents.

```
#include <stdio.h>

int main() {
    FILE *fp;
    char str[100];

    // Write to file
    fp = fopen("sample.txt", "w");
    if (fp == NULL) {
        printf("Error opening file for writing!\n");
        return 1;
    }

    printf("Enter a string to write into the file: ");
    gets(str);

    fprintf(fp, "%s", str);
    fclose(fp);

    // Read from file
    fp = fopen("sample.txt", "r");
    if (fp == NULL) {
        printf("Error opening file for reading!\n");
        return 1;
    }

    printf("\nContents of the file:\n");
    while (fgets(str, sizeof(str), fp) != NULL) {
        printf("%s", str);
    }

    fclose(fp);
    return 0;
}
```

```
PS D:\c language\ok> cd "d:\c language\ok\" ; if ($?) { gcc 6.c -o 6 } ; if ($?) { .\6 }  
Enter a string to write into the file: helo first file
```

Contents of the file:

helo first file

```
PS D:\c language\ok> 
```

f
